ABSTRACTED-PUB-NO: FR 2747139A

BASIC-ABSTRACT: The dispenser has a watertight tank (10)

containing the liquid

(12) with a volume of air (14) under pressure lower than atmospheric pressure.

There is an outlet (36), a pump to maintain the required

pressure (24) and a

second, open tank (28) connected to the first tank (10)

though the outlet. The

second tank has an opening which leads to the toilet bowl.

When the toilet is flushed, water flows into the top of the second tank and

forces air through the tube (26) into the first tank, which in turn forces the

required quantity of product through the outlet (36) into
